Allowable Subject Matter

2. Claims 1-23 are allowed.
3. The following is an examiner's statement of reasons for allowance: Applicant's independent claim 1 is allowed over the prior art of record because none teach or render obvious a method for fabricating an image display device comprising an active matrix substrate having a pixel region formed with a large number of pixels arranged as a matrix and a drive circuit region formed with an active circuit for supplying a drive signal to said pixels from outside said pixel region, the method comprising the steps of:
 4. selectively irradiating a portion of the polycrystalline silicon film located in said drive circuit region with a laser beam having a pulse width and /or a pulse interval modulated by scanning the laser beam on the substrate to form discrete reformed regions each composed of a quasi-strip-like-crystal silicon film resulting from reformation, said quasi-strip-like-crystal silicon film having a crystal boundary continuous in the direction of scanning. See **Voustas US Patent 6,664,147** where Voustas teaches a semiconductor method where a polycrystalline silicon

film is formed having a crystal boundary continuous in the direction of scanning, however fails the step where the laser beam on the substrate to form discrete reformed regions each composed of a quasi-strip-like-crystal silicon film resulting form reformation.
